UPDATES VERSION 2 (Tested)

- Returns to standard tool mounting to maintain compatibility of the original designs tool heads and bearing plates.
- Added a hole for allowing the X Axis rod extend past the Gantry.
- QOL improvements.
- Bottom side gantry support mounting added.

UPDATES: 5/26/26 (Tested)

- Add more alternate options.
- X Axis rod opening

UPDATES: 4/21/26

- Fix Widened D2F-L by 0.3mm. Issue exists on the corner blocks only. All other parts were unaffected. Both 350mm and 360mm corner blocks were

addressed. A couple passes of the DF2-L on a flat piece of sand paper will be all it needs if you printed prior to 4/21/26.

This mod is a remix of the original MGN MOD with a few changes.

Notes:

Due to the 2mm offset change on the threaded rod this is not compatible with the original tool mounts.

Don't forget to check tolerances with the test prints!

- There is no official BOM for this build.

For rails and rods not included:

2x 450mm TR8x8 Threaded Rod for Y and Y1 ~444mm

1x 350mm TR8x8 Threaded Rod for X ~320mm

2x 350mm MGN12H Linear Rails (or 360mm rails if you can find them)

1x 300mm MGN12H Linear Rails

All together you will need:

6x MGN12C Carriages

6x MGN12H Carriages

Along with required hardware in the original build BOM.

Plus you will need extra M3x8 and M3x10 to attach the linear rails to the extrusion and nuts for the threaded rods as well as attaching the carriages to their gantry.

Check out the discord link in the original build description!

Printed on an X1C with SUNLU PLA + 2.0 recommended E3CNC settings.

This remix is based on

E3CNC - Ender 3 Pro based CNC!
